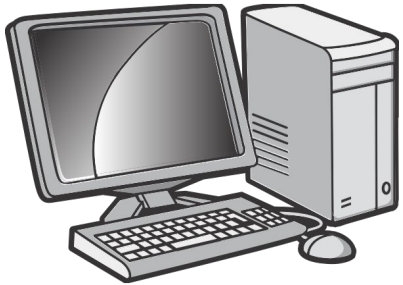
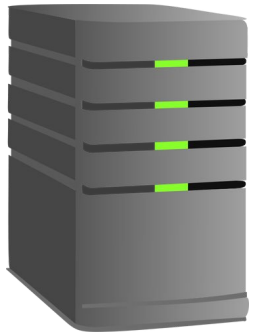
How does the Web work?



Client: browser

HTTP request

HTTP Response: HTML documents



internet server

The Web is a series of interactions between two types of systems, **clients** and **servers** that is done via the **HTTP** protocol.

What do you need to be a Web developer?

A good Web developer must have good grip on technical skills like client-side development **(front-end),** server-side development **(back-end)**, **database** technology and **version control**. They also need to have decent **problem solving** and **communication** skills.

Front-End Technologies

ReactJS, VueJS, etc

Back-end Technologies

NodeJS, ExpressJS, etc

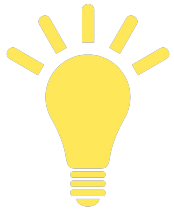
Database Management Systems

MySQL, MongoDB, etc

Version Control

Github, GitLab, etc

What is the role of a Web developer?



A full stack web developer is a person who can develop both **client and server software.** They rely on using their **problem solving** skills to **deliver web products** that meet the **clients requirements** in time.
